Profile

I am a fullstack developer in Tasikmalaya, Indonesia. Since August 2023 I have built websites for my company's internal needs. Since 2025 I have been building interfaces for operators: command center applications and web-based monitoring systems, then a desktop application in C++ with Qt.

Experience

Developer, internal websites, command center, and HMI

Solusi 247, Yogyakarta | August 2023 – Present

- Built websites for the company's internal needs.
- Since 2025, displaying system data in web and desktop (Qt) apps for operators, making sure the data is correct and the interface is easy to understand.
- Moved from web to C++ and Qt in about two months and built a working operator interface, with AI assistance and maintainable-code rules and best practices.

Projects

Flowvest: a personal finance app

Personal project · Next.js, React, TypeScript, Supabase, PostgreSQL

A multi-user finance app I designed and built on my own: transactions, budgets, accounts, net worth, savings goals and receivables. User data is protected by Row Level Security on every table.

Command center application for the maritime industry

Solusi 247 · Angular, TypeScript, Socket.IO, ECharts, Leaflet

A web interface that lets operators see a lot of data at once, find what matters quickly, and steer the ship from the same screen. Making sure the system does what it is told and the data matches its source.

Desktop HMI application with Qt

Solusi 247 · C++, Qt, HMI

A desktop interface for operators on the newest system, after moving from web to C++ and Qt.

Baywira: online shop and digital checkout for small businesses

Personal project · Next.js, NestJS, MySQL, Redis

An ordering and payment platform for small businesses: customers order through the shop QR code without an account, and sellers manage products and orders in a PWA that keeps working offline.

Rentang: a task and project schedule tracker

Personal project, open source · Svelte, TypeScript

A serverless Gantt app for tracking tasks and the critical path to each milestone. The core logic is plain TypeScript with 90% coverage.

Education

SMK Muhammadiyah Tasikmalaya

Software Engineering (Rekayasa Perangkat Lunak) | 2020 – 2023

Skills

Daily: C++, Qt, TypeScript, Angular, React

Have used: Next.js, Svelte, Node.js, NestJS, Express, Laravel, Tailwind CSS, MySQL, PostgreSQL, Supabase, Redis, Docker, Linux

Learning now: Three.js

> Available from August 2027
