Profile

I am a fullstack developer in Tasikmalaya, Indonesia. Since August 2023 I have been building interfaces for operators: command center applications and web-based monitoring systems, then a desktop application in C++ with Qt.

Experience

Developer, command center apps and HMI

Solusi 247, Yogyakarta | August 2023 – Present

- Displaying system data in web and desktop (Qt) apps, making sure the data is correct and the interface is easy for operators to understand.
- Moved from web to C++ and Qt in about two months and built a working operator interface, with AI assistance and maintainable-code rules and best practices.

Projects

Flowvest: a personal finance app

Personal project · Next.js, React, TypeScript, Supabase, PostgreSQL

A multi-user finance app I designed and built on my own: transactions, budgets, accounts, net worth, savings goals and receivables. User data is protected by Row Level Security on every table.

Command center application for the maritime industry

Solusi 247 · Web app, dashboard, HMI

A web interface that lets operators see a lot of data at once and find what matters quickly. Making sure the system does what it is told and the data matches its source.

Desktop HMI application with Qt

Solusi 247 · C++, Qt, HMI

A desktop interface for operators on the newest system, after moving from web to C++ and Qt.

Education

SMK Muhammadiyah Tasikmalaya

Software Engineering (Rekayasa Perangkat Lunak) | 2020 – 2023

Skills

Daily: C++, Qt, TypeScript, React

Have used: Next.js, Node.js, NestJS, Express, Laravel, MySQL, Docker, Linux

Learning now: Three.js
